# Detailed Contents

## 1 Biology and Its Themes 50

### CONCEPT 1.1 The study of life reveals unifying themes 51

- Theme: New Properties Emerge at Successive Levels of Biological Organization 52
- Theme: Life's Processes Involve the Expression and Transmission of Genetic Information 54
- Theme: Life Requires the Transfer and Transformation of Energy and Matter 57
- Theme: From Molecules to Ecosystems, Interactions Are Important in Biological Systems 57

### CONCEPT 1.2 The Core Theme: Evolution accounts for the unity and diversity of life 59

- Classifying the Diversity of Life 60
- Charles Darwin and the Theory of Natural Selection 62
- The Tree of Life 63

### CONCEPT 1.3 In studying nature, scientists form and test hypotheses 64

- Exploration and Observation 65
- Gathering and Analyzing Data 65
- Forming and Testing Hypotheses 65
- The Flexibility of the Scientific Process 66
- A Case Study in Scientific Inquiry: Investigating Coat Coloration in Mouse Populations* 68
- Variables and Controls in Experiments 68
- Theories in Science 69

### CONCEPT 1.4 Science benefits from a cooperative approach and diverse viewpoints 70

- Building on the Work of Others 70
- Science, Technology, and Society 71
- The Value of Diverse Viewpoints in Science 72

## Unit 1 The Role of Chemistry in Biology 75

**Interview:** Kenneth Olden 75

## 2 Atoms and Molecules 76

### CONCEPT 2.1 Matter consists of chemical elements in pure form and in combinations called compounds 77

- Elements and Compounds 77
- The Elements of Life 77
- Case Study: Evolution of Tolerance to Toxic Elements* 78

### CONCEPT 2.2 An element's properties depend on the structure of its atoms 78

- Subatomic Particles 78
- Atomic Number and Atomic Mass 79
- Isotopes 79
- The Energy Levels of Electrons 80
- Electron Distribution and Chemical Properties 82
- Electron Orbitals 83

### CONCEPT 2.3 The formation and function of molecules and ionic compounds depend on chemical bonding between atoms 84

- Covalent Bonds 84
- Ionic Bonds 85
- Weak Chemical Interactions 86
- Molecular Shape and Function 87

### CONCEPT 2.4 Chemical reactions make and break chemical bonds 88

## 3 The Chemistry of Water 92

### CONCEPT 3.1 Polar covalent bonds in water molecules result in hydrogen bonding 93

### CONCEPT 3.2 Four emergent properties of water contribute to Earth's suitability for life 93

- Cohesion of Water Molecules 93
- Moderation of Temperature by Water 94
- Floating of Ice on Liquid Water 96
- Water: The Solvent of Life 97
- Possible Evolution of Life on Other Planets 98

### CONCEPT 3.3 Acidic and basic conditions affect living organisms 99

- Acids and Bases 99
- The pH Scale 99
- Buffers 100
- Acidification: A Threat to Our Oceans 101

## 4 Carbon: The Basis of Molecular Diversity 104

### CONCEPT 4.1 Organic chemistry is key to the origin of life 105

### CONCEPT 4.2 Carbon atoms can form diverse molecules by bonding to four other atoms 106

- The Formation of Bonds with Carbon 106
- Molecular Diversity Arising from Variation in Carbon Skeletons 108

### CONCEPT 4.3 A few chemical groups are key to molecular function 110

- The Chemical Groups Most Important in the Processes of Life 110
- ATP: An Important Source of Energy for Cellular Processes 112
- The Chemical Elements of Life: A Review 112

## 5 Biological Macromolecules and Lipids 114

### CONCEPT 5.1 Macromolecules are polymers, built from monomers 115

The Synthesis and Breakdown of Polymers 115  
The Diversity of Polymers 115

### CONCEPT 5.2 Carbohydrates serve as fuel and building material 116

Sugars 116  
Polysaccharides 118

### CONCEPT 5.3 Lipids are a diverse group of hydrophobic molecules 120

Fats 120  
Phospholipids 122  
Steroids 123

### CONCEPT 5.4 Proteins include a diversity of structures, resulting in a wide range of functions 123

Amino Acids (Monomers) 123  
Polypeptides (Amino Acid Polymers) 126  
Protein Structure and Function 126

### CONCEPT 5.5 Nucleic acids store, transmit, and help express hereditary information 132

The Roles of Nucleic Acids 132  
The Components of Nucleic Acids 132  
Nucleotide Polymers 133  
The Structures of DNA and RNA Molecules 134

### CONCEPT 5.6 Genomics and proteomics have transformed biological inquiry and applications 134

DNA and Proteins as Tape Measures of Evolution 135

## 6 Energy and Life 141

### CONCEPT 6.1 An organism's metabolism transforms matter and energy 142

Metabolic Pathways 142  
Forms of Energy 142  
The Laws of Energy Transformation 143

### CONCEPT 6.2 The free-energy change of a reaction tells us whether or not the reaction occurs spontaneously 145

Free-Energy Change,  $\Delta G$  145  
Free Energy, Stability, and Equilibrium 145  
Free Energy and Metabolism 146

### CONCEPT 6.3 ATP powers cellular work by coupling exergonic reactions to endergonic reactions 148

The Structure and Hydrolysis of ATP 148  
How ATP Provides Energy That Performs Work 149  
The Regeneration of ATP 151

### CONCEPT 6.4 Enzymes speed up metabolic reactions by lowering energy barriers 151

The Activation Energy Barrier 151  
How Enzymes Speed Up Reactions 152  
Substrate Specificity of Enzymes 153  
Catalysis in the Enzyme's Active Site 154  
Effects of Local Conditions on Enzyme Activity 155  
The Evolution of Enzymes 157

### CONCEPT 6.5 Regulation of enzyme activity helps control metabolism 157

Allosteric Regulation of Enzymes 158  
Localization of Enzymes Within the Cell 159

## Unit 2 Cell Biology

162

**Interview:** Diana Bautista 162

## 7 Cell Structure and Function 163

### CONCEPT 7.1 Biologists use microscopes and biochemistry to study cells 164

Microscopy 164  
Cell Fractionation 166

### CONCEPT 7.2 Eukaryotic cells have internal membranes that compartmentalize their functions 167

Comparing Prokaryotic and Eukaryotic Cells 167  
A Panoramic View of the Eukaryotic Cell 169

### CONCEPT 7.3 The eukaryotic cell's genetic instructions are housed in the nucleus and carried out by the ribosomes 172

The Nucleus: Information Central 172  
Ribosomes: Protein Factories 172

### CONCEPT 7.4 The endomembrane system regulates protein traffic and performs metabolic functions 174

The Endoplasmic Reticulum: Biosynthetic Factory 174  
The Golgi Apparatus: Shipping and Receiving Center 175  
Lysosomes: Digestive Compartments 177  
Vacuoles: Diverse Maintenance Compartments 178  
The Endomembrane System: A Review 178

### CONCEPT 7.5 Mitochondria and chloroplasts change energy from one form to another 179

The Evolutionary Origins of Mitochondria and Chloroplasts 179  
Mitochondria: Chemical Energy Conversion 180  
Chloroplasts: Capture of Light Energy 180  
Peroxisomes: Oxidation 182

### CONCEPT 7.6 The cytoskeleton is a network of fibers that organizes structures and activities in the cell 182

Roles of the Cytoskeleton: Support and Motility 182  
Components of the Cytoskeleton 183

### CONCEPT 7.7 Extracellular components and connections between cells help coordinate cellular activities 188

Cell Walls of Plants 188  
The Extracellular Matrix (ECM) of Animal Cells 188  
Cell Junctions 189

### CONCEPT 7.8 A cell is greater than the sum of its parts 191

## 8 Cell Membranes 196

### CONCEPT 8.1 Cellular membranes are fluid mosaics of lipids and proteins 197

The Fluidity of Membranes 198  
Evolution of Differences in Membrane Lipid Composition 199

Membrane Proteins and Their Functions 199  
The Role of Membrane Carbohydrates in Cell-Cell  
Recognition 200  
Synthesis and Sidedness of Membranes 201

**CONCEPT 8.2** Membrane structure results in selective permeability 201

The Permeability of the Lipid Bilayer 202  
Transport Proteins 202

**CONCEPT 8.3** Passive transport is diffusion of a substance across a membrane with no energy investment 202

Effects of Osmosis on Water Balance 203  
Facilitated Diffusion: Passive Transport Aided by Proteins 205

**CONCEPT 8.4** Active transport uses energy to move solutes against their gradients 206

The Need for Energy in Active Transport 206  
How Ion Pumps Maintain Membrane Potential 207  
Cotransport: Coupled Transport by a Membrane Protein 208

**CONCEPT 8.5** Bulk transport across the plasma membrane occurs by exocytosis and endocytosis 209

Exocytosis 209  
Endocytosis 209

## 9 Cellular Signaling 214

**CONCEPT 9.1** External signals are converted to responses within the cell 215

Evolution of Cell Signaling 215  
Local and Long-Distance Signaling 217  
The Three Stages of Cell Signaling: *A Preview* 218

**CONCEPT 9.2** Signal reception: A signaling molecule binds to a receptor, causing it to change shape 219

Receptors in the Plasma Membrane 219  
Intracellular Receptors 222

**CONCEPT 9.3** Signal transduction: Cascades of molecular interactions transmit signals from receptors to relay molecules in the cell 223

Signal Transduction Pathways 223  
Protein Phosphorylation and Dephosphorylation 224  
Small Molecules and Ions as Second Messengers 225

**CONCEPT 9.4** Cellular response: Cell signaling leads to regulation of transcription or cytoplasmic activities 228

Nuclear and Cytoplasmic Responses 228  
Regulation of the Response 228

**CONCEPT 9.5** Apoptosis requires integration of multiple cell-signaling pathways 231

Apoptosis in the Soil Worm *Caenorhabditis elegans* 232  
Apoptotic Pathways and the Signals That Trigger Them 232

## 10 Cell Respiration 236

**CONCEPT 10.1** Catabolic pathways yield energy by oxidizing organic fuels 237

Catabolic Pathways and Production of ATP 237  
Redox Reactions: Oxidation and Reduction 237  
The Stages of Cellular Respiration: *A Preview* 240

**CONCEPT 10.2** Glycolysis harvests chemical energy by oxidizing glucose to pyruvate 242

**CONCEPT 10.3** After pyruvate is oxidized, the citric acid cycle completes the energy-yielding oxidation of organic molecules 243

Oxidation of Pyruvate to Acetyl CoA 243  
The Citric Acid Cycle 244

**CONCEPT 10.4** During oxidative phosphorylation, chemiosmosis couples electron transport to ATP synthesis 246

The Pathway of Electron Transport 246  
Chemiosmosis: The Energy-Coupling Mechanism 247  
An Accounting of ATP Production by Cellular Respiration 249

**CONCEPT 10.5** Fermentation and anaerobic respiration enable cells to produce ATP without the use of oxygen 251

Types of Fermentation 252  
Comparing Fermentation with Anaerobic and Aerobic Respiration 253  
The Evolutionary Significance of Glycolysis 254

**CONCEPT 10.6** Glycolysis and the citric acid cycle connect to many other metabolic pathways 254

The Versatility of Catabolism 254  
Biosynthesis (Anabolic Pathways) 255  
Regulation of Cellular Respiration via Feedback Mechanisms 255

## 11 Photosynthetic Processes 259

**CONCEPT 11.1** Photosynthesis feeds the biosphere 260

**CONCEPT 11.2** Photosynthesis converts light energy to the chemical energy of food 261

Chloroplasts: The Sites of Photosynthesis in Plants 261  
Tracking Atoms Through Photosynthesis 261  
The Two Stages of Photosynthesis: *A Preview* 263

**CONCEPT 11.3** The light reactions convert solar energy to the chemical energy of ATP and NADPH 264

The Nature of Sunlight 264  
Photosynthetic Pigments: The Light Receptors 264  
Excitation of Chlorophyll by Light 267  
A Photosystem: A Reaction-Center Complex Associated with Light-Harvesting Complexes 267  
Linear Electron Flow 269

Cyclic Electron Flow 270  
A Comparison of Chemiosmosis in Chloroplasts and Mitochondria 271

**CONCEPT 11.4** The Calvin cycle uses the chemical energy of ATP and NADPH to reduce CO<sub>2</sub> to sugar 273

**CONCEPT 11.5** Alternative mechanisms of carbon fixation have evolved in hot, arid climates 275

Photorespiration: An Evolutionary Relic? 275  
C<sub>4</sub> Plants 275  
CAM Plants 277

**CONCEPT 11.6** Photosynthesis is essential for life on Earth: a review 278

## 12 Mitosis 284

**CONCEPT 12.1** Most cell division results in genetically identical daughter cells 285

Key Roles of Cell Division 285  
Cellular Organization of the Genetic Material 285  
Distribution of Chromosomes During Eukaryotic Cell Division 286

**CONCEPT 12.2** The mitotic phase alternates with interphase in the cell cycle 287

Phases of the Cell Cycle 287  
The Mitotic Spindle: *A Closer Look* 290  
Cytokinesis: *A Closer Look* 291  
Binary Fission in Bacteria 292  
The Evolution of Mitosis 293

**CONCEPT 12.3** The eukaryotic cell cycle is regulated by a molecular control system 294

The Cell Cycle Control System 294  
Loss of Cell Cycle Controls in Cancer Cells 298

## Unit 3 The Genetic Basis of Life 303

**Interview:** Francisco Mojica 303

## 13 Sexual Life Cycles and Meiosis 304

**CONCEPT 13.1** Offspring acquire genes from parents by inheriting chromosomes 305

Inheritance of Genes 305  
Comparison of Asexual and Sexual Reproduction 305

**CONCEPT 13.2** Fertilization and meiosis alternate in sexual life cycles 306

Sets of Chromosomes in Human Cells 306  
Behavior of Chromosome Sets in the Human Life Cycle 307  
The Variety of Sexual Life Cycles 308

**CONCEPT 13.3** Meiosis reduces the number of chromosome sets from diploid to haploid 309

The Stages of Meiosis 309  
Crossing Over and Synapsis During Prophase I 312  
A Comparison of Mitosis and Meiosis 312

**CONCEPT 13.4** Genetic variation produced in sexual life cycles contributes to evolution 315

Origins of Genetic Variation Among Offspring 315  
The Evolutionary Significance of Genetic Variation Within Populations 316

## 14 Mendelian Genetics 319

**CONCEPT 14.1** Mendel used the scientific approach to identify two laws of inheritance 320

Mendel's Experimental, Quantitative Approach 320  
The Law of Segregation 321  
The Law of Independent Assortment 324

**CONCEPT 14.2** Probability laws govern Mendelian inheritance 326

The Multiplication and Addition Rules Applied to Monohybrid Crosses 327  
Solving Complex Genetics Problems with the Rules of Probability 327

**CONCEPT 14.3** Inheritance patterns are often more complex than predicted by simple Mendelian genetics 328

Extending Mendelian Genetics for a Single Gene 328  
Extending Mendelian Genetics for Two or More Genes 331  
Nature and Nurture: The Environmental Impact on Phenotype 332  
A Mendelian View of Heredity and Variation 332

**CONCEPT 14.4** Many human traits follow Mendelian patterns of inheritance 334

Pedigree Analysis 334  
Recessively Inherited Disorders 335  
Dominantly Inherited Disorders 337  
Multifactorial Disorders 337  
Genetic Testing and Counseling 337

## 15 Linkage and Chromosomes 344

**CONCEPT 15.1** Mendelian inheritance has its physical basis in the behavior of chromosomes 345

Morgan's Choice of Experimental Organism 345  
Correlating Behavior of a Gene's Alleles with Behavior of a Chromosome Pair: *Scientific Inquiry* 345

**CONCEPT 15.2** Sex-linked genes exhibit unique patterns of inheritance 348

The Chromosomal Basis of Sex 348  
Inheritance of X-Linked Genes 349  
X Inactivation in Female Mammals 350

**CONCEPT 15.3** Linked genes tend to be inherited together because they are located near each other on the same chromosome 351

How Linkage Affects Inheritance 351

Genetic Recombination and Linkage 352

Mapping the Distance Between Genes Using Recombination Data: *Scientific Inquiry* 355

**CONCEPT 15.4** Alterations of chromosome number or structure cause some genetic disorders 356

Abnormal Chromosome Number 357

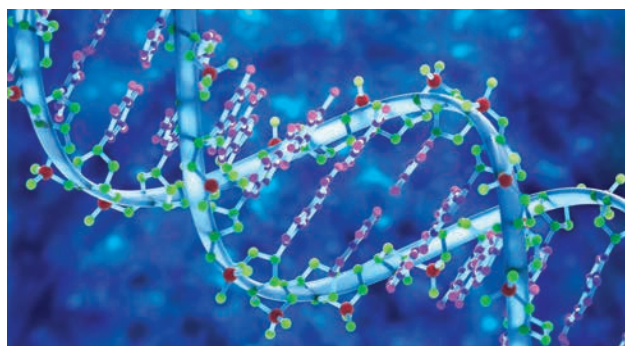

Alterations of Chromosome Structure 357

Human Conditions Due to Chromosomal Alterations 358

**CONCEPT 15.5** Some inheritance patterns are exceptions to standard Mendelian inheritance 360

Genomic Imprinting 360

Inheritance of Organelle Genes 361

## 16 Nucleic Acids and Inheritance 364

**CONCEPT 16.1** DNA is the genetic material 365

The Search for the Genetic Material: *Scientific Inquiry* 365

Building a Structural Model of DNA 367

**CONCEPT 16.2** Many proteins work together in DNA replication and repair 370

The Basic Principle: Base Pairing to a Template Strand 371

DNA Replication: *A Closer Look* 372

Proofreading and Repairing DNA 377

Evolutionary Significance of Altered DNA Nucleotides 378

Replicating the Ends of DNA Molecules 378

**CONCEPT 16.3** A chromosome consists of a DNA molecule packed together with proteins 380

## 17 Expression of Genes 385

**CONCEPT 17.1** Genes specify proteins via transcription and translation 386

Evidence from Studying Metabolic Defects 386

Basic Principles of Transcription and Translation 387

The Genetic Code 390

**CONCEPT 17.2** Transcription is the DNA-directed synthesis of RNA: *A Closer Look* 392

Molecular Components of Transcription 392

Synthesis of an RNA Transcript 392

**CONCEPT 17.3** Eukaryotic cells modify RNA after transcription 395

Alteration of mRNA Ends 395

Split Genes and RNA Splicing 395

**CONCEPT 17.4** Translation is the RNA-directed synthesis of a polypeptide: *A Closer Look* 397

Molecular Components of Translation 398

Building a Polypeptide 400

Completing and Targeting the Functional Protein 402

Making Multiple Polypeptides in Bacteria and Eukaryotes 405

**CONCEPT 17.5** Mutations of one or a few nucleotides can affect protein structure and function 407

Types of Small-Scale Mutations 407

New Mutations and Mutagens 410

Using CRISPR to Edit Genes and Correct Disease-Causing

Mutations 410

What Is a Gene? *Revisiting the Question* 411

## 18 Control of Gene Expression 415

**CONCEPT 18.1** Bacteria often respond to environmental change by regulating transcription 416

Operons: The Basic Concept 416

Repressible and Inducible Operons: Two Types of Negative Gene Regulation 418

Positive Gene Regulation 419

**CONCEPT 18.2** Eukaryotic gene expression is regulated at many stages 420

Differential Gene Expression 420

Regulation of Chromatin Structure 421

Regulation of Transcription Initiation 423

Mechanisms of Post-transcriptional Regulation 427

**CONCEPT 18.3** Noncoding RNAs play multiple roles in controlling gene expression 429

Effects on mRNAs by MicroRNAs and Small Interfering RNAs 429

Chromatin Remodeling and Effects on Transcription by ncRNAs 430

**CONCEPT 18.4** A program of differential gene expression leads to the different cell types in a multicellular organism 431

A Genetic Program for Embryonic Development 431

Cytoplasmic Determinants and Inductive Signals 432

Sequential Regulation of Gene Expression During Cellular Differentiation 433

Pattern Formation: Setting Up the Body Plan 434

**CONCEPT 18.5** Cancer results from genetic changes that affect cell cycle control 438

Types of Genes Associated with Cancer 438

Interference with Normal Cell-Signaling

Pathways 439

The Multistep Model of Cancer Development 441

Inherited Predisposition and Environmental Factors Contributing to Cancer 444

The Role of Viruses in Cancer 444

## 19 DNA Technology 449

**CONCEPT 19.1** DNA sequencing and DNA cloning are valuable tools for genetic engineering and biological inquiry 450

DNA Sequencing 450

Making Multiple Copies of a Gene or Other DNA Segment 452

Using Restriction Enzymes to Make a Recombinant DNA Plasmid 453

Amplifying DNA: The Polymerase Chain Reaction (PCR) and Its Use in DNA Cloning 454

Expressing Cloned Eukaryotic Genes 456

**CONCEPT 19.2** Biologists use DNA technology to study gene expression and function 457

Analyzing Gene Expression 457

Determining Gene Function 460

**CONCEPT 19.3** Cloned organisms and stem cells are useful for basic research and other applications 462

Cloning Plants: Single-Cell Cultures 462

Cloning Animals: Nuclear Transplantation 462

Stem Cells of Animals 464

**CONCEPT 19.4** The practical applications of DNA-based biotechnology affect our lives in many ways 467

Medical Applications 467

Forensic Evidence and Genetic Profiles 470

Environmental Cleanup 471

Agricultural Applications 471

Safety and Ethical Questions Raised by DNA Technology 472

## 20 The Evolution of Genomes 476

**CONCEPT 20.1** The Human Genome Project fostered development of faster, less expensive sequencing techniques 477

**CONCEPT 20.2** Scientists use bioinformatics to analyze genomes and their functions 478

Centralized Resources for Analyzing Genome Sequences 478

Identifying Protein-Coding Genes and Understanding Their Functions 479

Understanding Genes and Gene Expression at the Systems Level 480

**CONCEPT 20.3** Genomes vary in size, number of genes, and gene density 482

Genome Size 482

Number of Genes 483

Gene Density and Noncoding DNA 483

**CONCEPT 20.4** Multicellular eukaryotes have a lot of noncoding DNA and many multigene families 484

Transposable Elements and Related Sequences 485

Other Repetitive DNA, Including Simple Sequence DNA 486

Genes and Multigene Families 486

**CONCEPT 20.5** Duplication, rearrangement, and mutation of DNA contribute to genome evolution 488

Duplication of Entire Chromosome Sets 488

Alterations of Chromosome

Structure 488

Duplication and Divergence of Gene-Sized Regions of DNA 489

Rearrangements of Parts of Genes:

Exon Duplication and Exon

Shuffling 490

How Transposable Elements

Contribute to Genome

Evolution 493

**CONCEPT 20.6** Comparing genome sequences provides clues to evolution and development 493

Comparing Genomes 493

Widespread Conservation of

Developmental Genes Among

Animals 497

## Unit 4 Evolution

501

**Interview:** Cassandra Extavour 501

## 21 How Evolution Works 502

**CONCEPT 21.1** The Darwinian revolution challenged traditional views of a young Earth inhabited by unchanging species 503

Endless Forms Most Beautiful 503

*Scala Naturae* and Classification of Species 504

Ideas About Change over Time 504

Lamarck's Hypothesis of Evolution 505

**CONCEPT 21.2** Descent with modification by natural selection explains the adaptations of organisms and the unity and diversity of life 505

Darwin's Research 505

Ideas from *The Origin of Species* 507

Key Features of Natural Selection 510

**CONCEPT 21.3** Evolution is supported by an overwhelming amount of scientific evidence 510

Direct Observations of Evolutionary Change 511

Homology 513

The Fossil Record 515

Biogeography 516

What Is Theoretical About Darwin's View of Life? 517

## 22 Phylogenetic Reconstruction 521

**CONCEPT 22.1** Phylogenies show evolutionary relationships 522

Binomial Nomenclature 522

Hierarchical Classification 522

Linking Classification and Phylogeny 523

What We Can and Cannot Learn from Phylogenetic Trees 523

Applying Phylogenies 525

**CONCEPT 22.2** Phylogenies are inferred from morphological and molecular data 526

Morphological and Molecular Homologies 526

Sorting Homology from Analogy 526

Evaluating Molecular Homologies 527

**CONCEPT 22.3** Shared characters are used to construct phylogenetic trees 527

Cladistics 527

Phylogenetic Trees with Proportional Branch Lengths 529

Maximum Parsimony and Maximum Likelihood 530

Phylogenetic Trees as Hypotheses 532

**CONCEPT 22.4** An organism's evolutionary history is documented in its genome 533

Gene Duplications and Gene Families 533

Genome Evolution 534

**CONCEPT 22.5** Molecular clocks help track evolutionary time 534

Molecular Clocks 534

Applying a Molecular Clock: Dating the Origin of HIV 535

**CONCEPT 22.6** Our understanding of the tree of life continues to change based on new data 536

From Two Kingdoms to Three Domains 536

The Important Role of Horizontal Gene Transfer 536

## 23 Microevolution 542

### CONCEPT 23.1 Genetic variation makes evolution possible 543

- Genetic Variation 543
- Sources of Genetic Variation 544

### CONCEPT 23.2 The Hardy-Weinberg equation can be used to test whether a population is evolving 545

- Gene Pools and Allele Frequencies 546
- The Hardy-Weinberg Equation 546

### CONCEPT 23.3 Natural selection, genetic drift, and gene flow can alter allele frequencies in a population 549

- Natural Selection 550
- Genetic Drift 550
- Gene Flow 552

### CONCEPT 23.4 Natural selection is the only mechanism that consistently causes adaptive evolution 553

- Natural Selection: *A Closer Look* 553
- The Key Role of Natural Selection in Adaptive Evolution 554
- Sexual Selection 555
- Balancing Selection 556
- Why Natural Selection Cannot Fashion Perfect Organisms 557

## 24 Species and Speciation 562

### CONCEPT 24.1 The biological species concept emphasizes reproductive isolation 563

- The Biological Species Concept 563
- Other Definitions of Species 566

### CONCEPT 24.2 Speciation can take place with or without geographic separation 567

- Allopatric ("Other Country") Speciation 567
- Sympatric ("Same Country") Speciation 569
- Allopatric and Sympatric Speciation: *A Review* 572

### CONCEPT 24.3 Hybrid zones reveal factors that cause reproductive isolation 572

- Patterns Within Hybrid Zones 572
- Hybrid Zones and Environmental Change 573
- Hybrid Zones over Time 574

### CONCEPT 24.4 Speciation can occur rapidly or slowly and can result from changes in few or many genes 576

- The Time Course of Speciation 576
- Studying the Genetics of Speciation 578
- From Speciation to Macroevolution 579

## 25 Macroevolution 581

### CONCEPT 25.1 Conditions on early Earth made the origin of life possible 582

- Synthesis of Organic Compounds on Early Earth 582
- Abiotic Synthesis of Macromolecules 583
- Protocells 583
- Self-Replicating RNA 584

### CONCEPT 25.2 The fossil record documents the history of life 584

- The Fossil Record 585
- How Rocks and Fossils Are Dated 585
- The Origin of New Groups of Organisms 586

### CONCEPT 25.3 Key events in life's history include the origins of unicellular and multicellular organisms and the colonization of land 588

- The First Single-Celled Organisms 589
- The Origin of Multicellularity 591
- The Colonization of Land 592

### CONCEPT 25.4 The rise and fall of groups of organisms reflect differences in speciation and extinction rates 593

- Plate Tectonics 594
- Mass Extinctions 596
- Adaptive Radiations 598

### CONCEPT 25.5 Major changes in body form can result from changes in the sequences and regulation of developmental genes 600

- Effects of Developmental Genes 600
- The Evolution of Development 601

### CONCEPT 25.6 Evolution is not goal oriented 603

- Evolutionary Novelties 603
- Evolutionary Trends 604

## Unit 5 The Diversity of Life

609

Interview: Penny Chisholm 609

## 26 Introduction to Viruses 610

### CONCEPT 26.1 A virus consists of a nucleic acid surrounded by a protein coat 611

- The Discovery of Viruses: *Scientific Inquiry* 611
- Structure of Viruses 611

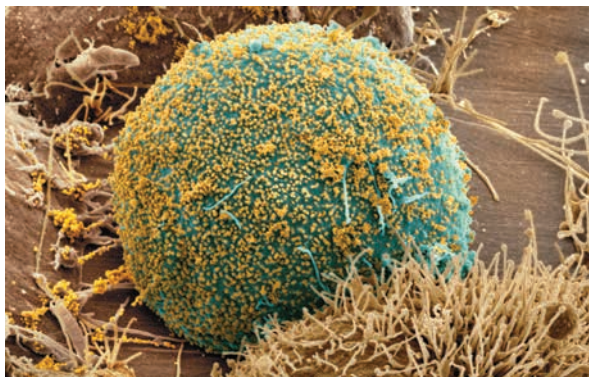

### CONCEPT 26.2 Viruses replicate only in host cells 613

- General Features of Viral Replicative Cycles 613
- Replicative Cycles of Phages 614
- Replicative Cycles of Animal Viruses 616
- Evolution of Viruses 618

### CONCEPT 26.3 Viruses and prions are formidable pathogens in animals and plants 620

- Viral Diseases in Animals 620
- Emerging Viral Diseases 621
- Viral Diseases in Plants 624
- Prions: Proteins as Infectious Agents 624

## 27 Prokaryotes 627

**CONCEPT 27.1** Structural and functional adaptations contribute to prokaryotic success 628

Cell-Surface Structures 628

Motility 630

Internal Organization and DNA 631

Reproduction 631

**CONCEPT 27.2** Rapid reproduction, mutation, and genetic recombination promote genetic diversity in prokaryotes 632

Rapid Reproduction and Mutation 632

Genetic Recombination 633

**CONCEPT 27.3** Diverse nutritional and metabolic adaptations have evolved in prokaryotes 635

The Role of Oxygen in Metabolism 636

Nitrogen Metabolism 636

Metabolic Cooperation 636

**CONCEPT 27.4** Prokaryotes have radiated into a diverse set of lineages 637

An Overview of Prokaryotic Diversity 637

Bacteria 637

Archaea 639

**CONCEPT 27.5** Prokaryotes play crucial roles in the biosphere 640

Chemical Recycling 640

Ecological Interactions 641

**CONCEPT 27.6** Prokaryotes have both beneficial and harmful impacts on humans 641

Mutualistic Bacteria 641

Pathogenic Bacteria 642

Antibiotic Resistance 642

Prokaryotes in Research and Technology 643

## 28 The Origin and Evolution of Eukaryotes 647

**CONCEPT 28.1** Most eukaryotes are single-celled organisms 648

Structural and Functional Diversity in Protists 648

Endosymbiosis in Eukaryotic Evolution 648

Four Supergroups of Eukaryotes 651

**CONCEPT 28.2** Excavates include protists with modified mitochondria and protists with unique flagella 651

Diplomonads and Parabasalids 654

Euglenozoans 654

**CONCEPT 28.3** SAR is a highly diverse group of protists defined by DNA similarities 655

Stramenopiles 656

Alveolates 658

Rhizarians 660

**CONCEPT 28.4** Red algae and green algae are the closest relatives of plants 663

Red Algae 663

Green Algae 664

**CONCEPT 28.5** Unikonts include protists that are closely related to fungi and animals 665

Amoebozoans 666

Opisthokonts 667

**CONCEPT 28.6** Protists play key roles in ecological communities 668

Symbiotic Protists 668

Photosynthetic Protists 668

## 29 Nonvascular and Seedless Vascular Plants 672

**CONCEPT 29.1** Plants evolved from green algae 673

Evidence of Algal Ancestry 673

Adaptations Enabling the Move to Land 673

Derived Traits of Plants 675

The Origin and Diversification of Plants 675

**CONCEPT 29.2** Mosses and other nonvascular plants have life cycles dominated by gametophytes 677

Bryophyte Gametophytes 678

Bryophyte Sporophytes 679

The Ecological and Economic Importance of Mosses 681

**CONCEPT 29.3** Ferns and other seedless vascular plants were the first plants to grow tall 683

Origins and Traits of Vascular Plants 683

Classification of Seedless Vascular Plants 685

The Significance of Seedless Vascular Plants 687

## 30 Seed Plants 690

**CONCEPT 30.1** Seeds and pollen grains are key adaptations for life on land 691

Advantages of Reduced Gametophytes 691

Heterospory: The Rule Among Seed Plants 692

Ovules and Production of Eggs 692  
 Pollen and Production of Sperm 692  
 The Evolutionary Advantage of Seeds 693

**CONCEPT 30.2** Gymnosperms bear “naked” seeds, typically on cones 694

The Life Cycle of a Pine 694  
 Early Seed Plants and the Rise of Gymnosperms 695  
 Gymnosperm Diversity 695

**CONCEPT 30.3** The reproductive adaptations of angiosperms include flowers and fruits 698

Characteristics of Angiosperms 698  
 Angiosperm Evolution 701  
 Angiosperm Diversity 703

**CONCEPT 30.4** Human welfare depends on seed plants 705

Products from Seed Plants 705  
 Threats to Plant Diversity 705

## 31 Introduction to Fungi 708

**CONCEPT 31.1** Fungi are heterotrophs that feed by absorption 709

Nutrition and Ecology 709  
 Body Structure 709  
 Specialized Hyphae in Mycorrhizal Fungi 710

**CONCEPT 31.2** Fungi produce spores through sexual or asexual life cycles 711

Sexual Reproduction 712  
 Asexual Reproduction 712

**CONCEPT 31.3** The ancestor of fungi was an aquatic, single-celled, flagellated protist 713

The Origin of Fungi 713  
 The Move to Land 714

**CONCEPT 31.4** Fungi have radiated into a diverse set of lineages 714

Cryptomycetes and Microsporidians 715  
 Zoopagomycetes 716  
 Mucoromycetes 717  
 Ascomycetes 717  
 Basidiomycetes 719

**CONCEPT 31.5** Fungi play key roles in nutrient cycling, ecological interactions, and human welfare 721

Fungi as Decomposers 721  
 Fungi as Mutualists 721  
 Practical Uses of Fungi 724

## 32 An Introduction to Animal Diversity 727

**CONCEPT 32.1** Animals are multicellular, heterotrophic eukaryotes with tissues that develop from embryonic layers 728

Nutritional Mode 728  
 Cell Structure and Specialization 728  
 Reproduction and Development 728

**CONCEPT 32.2** The history of animals spans more than half a billion years 729

Steps in the Origin of Multicellular Animals 729  
 Neoproterozoic Era (1 Billion–541 Million Years Ago) 730  
 Paleozoic Era (541–252 Million Years Ago) 731  
 Mesozoic Era (252–66 Million Years Ago) 733  
 Cenozoic Era (66 Million Years Ago to the Present) 733

**CONCEPT 32.3** Animals can be characterized by body plans 733

Symmetry 733  
 Tissues 733  
 Body Cavities 734  
 Protostome and Deuterostome Development 735

**CONCEPT 32.4** Views of animal phylogeny continue to be shaped by new molecular and morphological data 736

The Diversification of Animals 736  
 Future Directions in Animal Systematics 738

## 33 Invertebrates 740

**CONCEPT 33.1** Sponges are basal animals that lack tissues 744

**CONCEPT 33.2** Cnidarians are an ancient phylum of eumetazoans 745

Medusozoans 746  
 Anthozoans 747

**CONCEPT 33.3** Lophotrochozoans, a clade identified by molecular data, have the widest range of animal body forms 748

Flatworms 748  
 Rotifers and Acanthocephalans 751  
 Ectoprocts and Brachiopods 752  
 Molluscs 753  
 Annelids 757

**CONCEPT 33.4** Ecdysozoans are the most species-rich animal group 759

Nematodes 759  
 Arthropods 760

**CONCEPT 33.5** Echinoderms and chordates are deuterostomes 767

Echinoderms 767  
 Chordates 769

## 34 Vertebrates 772

**CONCEPT 34.1** Chordates have a notochord and a dorsal, hollow nerve cord 773

Derived Characters of Chordates 773  
Lancelets 774  
Tunicates 775  
Early Chordate Evolution 776

**CONCEPT 34.2** Vertebrates are chordates that have a backbone 776

Derived Characters of Vertebrates 776  
Hagfishes and Lampreys 777  
Early Vertebrate Evolution 778

**CONCEPT 34.3** Gnathostomes are vertebrates that have jaws 779

Derived Characters of Gnathostomes 779  
Fossil Gnathostomes 780  
Chondrichthyans (Sharks, Rays, and Their Relatives) 780  
Ray-Finned Fishes and Lobe-Fins 782

**CONCEPT 34.4** Tetrapods are gnathostomes that have limbs 784

Derived Characters of Tetrapods 784  
The Origin of Tetrapods 785  
Amphibians 785

**CONCEPT 34.5** Amniotes are tetrapods that have a terrestrially adapted egg 788

Derived Characters of Amniotes 788  
Early Amniotes 789  
Reptiles 789

**CONCEPT 34.6** Mammals are amniotes that have hair and produce milk 795

Derived Characters of Mammals 795  
Early Evolution of Mammals 795  
Monotremes 796  
Marsupials 797  
Eutherians (Placental Mammals) 798

**CONCEPT 34.7** Humans are mammals that have a large brain and bipedal locomotion 802

Derived Characters of Humans 802  
The Earliest Hominins 802  
Australopiths 803  
Bipedalism 804  
Tool Use 804  
Early *Homo* 804  
Neanderthals 806  
*Homo sapiens* 807

## Unit 6 Plants: Structure and Function 811

**Interview:** Dennis Gonsalves 811

## 35 Plant Structure and Growth 812

**CONCEPT 35.1** Plants have a hierarchical organization consisting of organs, tissues, and cells 813

Vascular Plant Organs: Roots, Stems, and Leaves 813  
Dermal, Vascular, and Ground Tissues 816  
Common Types of Plant Cells 817

**CONCEPT 35.2** Different meristems generate new cells for primary and secondary growth 820

**CONCEPT 35.3** Primary growth lengthens roots and shoots 822

Primary Growth of Roots 822  
Primary Growth of Shoots 823

**CONCEPT 35.4** Secondary growth increases the diameter of stems and roots in woody plants 826

The Vascular Cambium and Secondary Vascular Tissue 827  
The Cork Cambium and the Production of Periderm 828  
Evolution of Secondary Growth 828

**CONCEPT 35.5** Growth, morphogenesis, and cell differentiation produce the plant body 829

Model Organisms: Revolutionizing the Study of Plants 830  
Growth: Cell Division and Cell Expansion 830  
Morphogenesis and Pattern Formation 831  
Gene Expression and the Control of Cell Differentiation 832  
Shifts in Development: Phase Changes 832  
Genetic Control of Flowering 833

## 36 Transport in Vascular Plants 838

**CONCEPT 36.1** Adaptations for acquiring resources were key steps in the evolution of vascular plants 839

Shoot Architecture and Light Capture 839  
Root Architecture and Acquisition of Water and Minerals 841

**CONCEPT 36.2** Different mechanisms transport substances over short or long distances 841

The Apoplast and Symplast: Transport Continuums 841  
Short-Distance Transport of Solutes Across Plasma Membranes 842  
Short-Distance Transport of Water Across Plasma Membranes 842  
Long-Distance Transport: The Role of Bulk Flow 845

**CONCEPT 36.3** Transpiration drives the transport of water and minerals from roots to shoots via the xylem 846

Absorption of Water and Minerals by Root Cells 846  
Transport of Water and Minerals into the Xylem 846  
Bulk Flow Transport via the Xylem 846  
Xylem Sap Ascent by Bulk Flow: A Review 850

**CONCEPT 36.4** The rate of transpiration is regulated by stomata 850

Stomata: Major Pathways for Water Loss 850  
Mechanisms of Stomatal Opening and Closing 851  
Stimuli for Stomatal Opening and Closing 852  
Effects of Transpiration on Wilting and Leaf Temperature 852  
Adaptations That Reduce Evaporative Water Loss 852

**CONCEPT 36.5** Sugars are transported from sources to sinks via the phloem 853

Movement from Sugar Sources to Sugar Sinks 853  
Bulk Flow by Positive Pressure: The Mechanism of Translocation in Angiosperms 854

**CONCEPT 36.6** The symplast is highly dynamic 855

Changes in Plasmodesmatal Number and Pore Size 856  
Phloem: An Information Superhighway 856  
Electrical Signaling in the Phloem 856

## 37 Plant Nutrition 859

**CONCEPT 37.1** Soil contains a living, complex ecosystem 860

Soil Texture 860  
Topsoil Composition 860  
Soil Conservation and Sustainable Agriculture 861

**CONCEPT 37.2** Plant roots absorb many types of essential elements from the soil 863

Essential Elements 864  
Symptoms of Mineral Deficiency 864  
Global Climate Change and Food Quality 866

**CONCEPT 37.3** Plant nutrition often involves relationships with other organisms 866

Bacteria and Plant Nutrition 868  
Fungi and Plant Nutrition 871  
Epiphytes, Parasitic Plants, and Carnivorous Plants 872

## 38 Reproduction of Flowering Plants 876

**CONCEPT 38.1** Flowers, double fertilization, and fruits are key features of the angiosperm life cycle 877

Flower Structure and Function 877  
Methods of Pollination 879  
The Angiosperm Life Cycle: An Overview 880  
Development of Female Gametophytes (Embryo Sacs) 880  
Development of Male Gametophytes in Pollen Grains 880  
Seed Development and Structure 882  
Sporophyte Development from Seed to Mature Plant 883  
Fruit Structure and Function 884

**CONCEPT 38.2** Flowering plants reproduce sexually, asexually, or both 887

Mechanisms of Asexual Reproduction 887  
Advantages and Disadvantages of Asexual and Sexual Reproduction 887

Mechanisms That Prevent Self-Fertilization 888  
Totipotency, Vegetative Reproduction, and Tissue Culture 889

**CONCEPT 38.3** People modify crops by breeding and genetic engineering 890

Plant Breeding 891  
Plant Biotechnology and Genetic Engineering 891  
The Debate over Plant Biotechnology 893

## 39 Plant Signals and Behavior 896

**CONCEPT 39.1** Signal transduction pathways link signal reception to response 897

Reception 898  
Transduction 898  
Response 899

**CONCEPT 39.2** Plants use chemicals to communicate 899

General Characteristics of Plant Hormones 900  
A Survey of Plant Hormones 901

**CONCEPT 39.3** Responses to light are critical for plant success 909

Blue-Light Photoreceptors 909  
Phytochrome Photoreceptors 910  
Biological Clocks and Circadian Rhythms 911  
The Effect of Light on the Biological Clock 912  
Photoperiodism and Responses to Seasons 913

**CONCEPT 39.4** Plants respond to a wide variety of stimuli other than light 915

Gravity 915  
Mechanical Stimuli 915  
Environmental Stresses 916

**CONCEPT 39.5** Plants respond to attacks by pathogens and herbivores 920

Defenses Against Pathogens 920  
Defenses Against Herbivores 921

## Unit 7 Animals: Structure and Function 926

**Interview:** Steffanie Strathdee 926

## 40 The Animal Body 927

**CONCEPT 40.1** Animal form and function are correlated at all levels of organization 928

Evolution of Animal Size and Shape 928  
Exchange with the Environment 928

Hierarchical Organization of Body Plans 930  
Coordination and Control 934

**CONCEPT 40.2** Feedback control maintains the internal environment in many animals 935

Regulating and Conforming 935  
Homeostasis 935

**CONCEPT 40.3** Homeostatic processes for thermoregulation involve form, function, and behavior 938

Endothermy and Ectothermy 938  
Variation in Body Temperature 938  
Balancing Heat Loss and Gain 939  
Acclimatization in Thermoregulation 942  
Physiological Thermostats and Fever 942

**CONCEPT 40.4** Energy requirements are related to animal size, activity, and environment 943

Energy Allocation and Use 943  
Quantifying Energy Use 944  
Minimum Metabolic Rate and Thermoregulation 944  
Influences on Metabolic Rate 945  
Torpor and Energy Conservation 946

## 41 Chemical Signals in Animals 953

**CONCEPT 41.1** Hormones and other signaling molecules bind to target receptors, triggering specific response pathways 954

Intercellular Information Flow 954  
Chemical Classes of Hormones 955  
Cellular Hormone Response Pathways 956  
Endocrine Tissues and Organs 957

**CONCEPT 41.2** Feedback regulation and coordination with the nervous system are common in hormone pathways 958

Simple Endocrine Pathways 958  
Simple Neuroendocrine Pathways 959  
Feedback Regulation 959  
Coordination of the Endocrine and Nervous Systems 960  
Thyroid Regulation: A Hormone Cascade Pathway 962  
Hormonal Regulation of Growth 963

**CONCEPT 41.3** Endocrine glands respond to diverse stimuli in regulating homeostasis, development, and behavior 965

Parathyroid Hormone and Vitamin D: Control of Blood Calcium 965  
Adrenal Hormones: Response to Stress 966  
Sex Hormones 968  
Hormones and Biological Rhythms 969  
Evolution of Hormone Function 969

## 42 Animal Digestive Systems 974

**CONCEPT 42.1** An animal's diet must supply chemical energy, organic building blocks, and essential nutrients 975

Essential Nutrients 975  
Variation in Diet 977  
Dietary Deficiencies 977  
Assessing Nutritional Needs 978

**CONCEPT 42.2** Food processing involves ingestion, digestion, absorption, and elimination 978

Digestive Compartments 980

**CONCEPT 42.3** Organs specialized for sequential stages of food processing form the mammalian digestive system 981

The Oral Cavity, Pharynx, and Esophagus 981  
Digestion in the Stomach 983  
Digestion in the Small Intestine 984  
Absorption in the Small Intestine 985  
Processing in the Large Intestine 986

**CONCEPT 42.4** Evolutionary adaptations of vertebrate digestive systems correlate with diet 987

Dental Adaptations 987  
Stomach and Intestinal Adaptations 988  
Mutualistic Adaptations 988

**CONCEPT 42.5** Feedback circuits regulate digestion, energy storage, and appetite 991

Regulation of Digestion 991  
Regulation of Energy Storage 991  
Regulation of Appetite and Consumption 993

## 43 Animal Transport Systems 997

**CONCEPT 43.1** Circulatory systems link exchange surfaces with cells throughout the body 998

Gastrovascular Cavities 998  
Open and Closed Circulatory Systems 999  
Organization of Vertebrate Circulatory Systems 1000

**CONCEPT 43.2** Coordinated cycles of heart contraction drive double circulation in mammals 1002

Mammalian Circulation 1002  
The Mammalian Heart: A Closer Look 1002  
Maintaining the Heart's Rhythmic Beat 1004

**CONCEPT 43.3** Patterns of blood pressure and flow reflect the structure and arrangement of blood vessels 1005

Blood Vessel Structure and Function 1005  
Blood Flow Velocity 1006  
Blood Pressure 1006  
Capillary Function 1008  
Fluid Return by the Lymphatic System 1009

**CONCEPT 43.4** Blood components function in exchange, transport, and defense 1010

Blood Composition and Function 1010  
Cardiovascular Disease 1013

**CONCEPT 43.5** Gas exchange occurs across specialized respiratory surfaces 1015

Partial Pressure Gradients in Gas Exchange 1015  
Respiratory Media 1015  
Respiratory Surfaces 1016  
Gills in Aquatic Animals 1016  
Tracheal Systems in Insects 1017  
Lungs 1018

**CONCEPT 43.6** Breathing ventilates the lungs 1020

How an Amphibian Breathes 1020  
How a Bird Breathes 1020  
How a Mammal Breathes 1021  
Control of Breathing in Humans 1022

**CONCEPT 43.7** Adaptations for gas exchange include pigments that bind and transport gases 1023

Coordination of Circulation and Gas Exchange 1023  
Respiratory Pigments 1023  
Respiratory Adaptations of Diving Mammals 1025

## 44 Animal Excretory Systems 1029

### CONCEPT 44.1 Osmoregulation balances the uptake and loss of water and solutes 1030

- Osmosis and Osmolarity 1030
- Osmoregulatory Challenges and Mechanisms 1030
- Energetics of Osmoregulation 1032
- Transport Epithelia in Osmoregulation 1033

### CONCEPT 44.2 An animal's nitrogenous wastes reflect its phylogeny and habitat 1034

- Forms of Nitrogenous Waste 1034
- The Influence of Evolution and Environment on Nitrogenous Wastes 1035

### CONCEPT 44.3 Diverse excretory systems are variations on a tubular theme 1035

- Survey of Excretory Systems 1036

### CONCEPT 44.4 The nephron is organized for stepwise processing of blood filtrate 1039

- From Blood Filtrate to Urine: *A Closer Look* 1039
- Solute Gradients and Water Conservation 1041
- Adaptations of the Vertebrate Kidney to Diverse Environments 1043

### CONCEPT 44.5 Hormonal circuits link kidney function, water balance, and blood pressure 1046

- Homeostatic Regulation of the Kidney 1046

## 45 Animal Reproductive Systems 1051

### CONCEPT 45.1 Both asexual and sexual reproduction occur in the animal kingdom 1052

- Mechanisms of Asexual Reproduction 1052
- Variation in Patterns of Sexual Reproduction 1052
- Reproductive Cycles 1053
- Sexual Reproduction: An Evolutionary Enigma 1053

### CONCEPT 45.2 Fertilization depends on mechanisms that bring together sperm and eggs of the same species 1054

- Ensuring the Survival of Offspring 1055
- Gamete Production and Delivery 1055

### CONCEPT 45.3 Reproductive organs produce and transport gametes 1057

- Human Male Reproductive Anatomy 1057
- Human Female Reproductive Anatomy 1058
- Gametogenesis 1059

### CONCEPT 45.4 The interplay of tropic and sex hormones regulates reproduction in mammals 1062

- Biological Sex, Gender Identity, and Sexual Orientation in Human Sexuality 1063
- Hormonal Control of the Male Reproductive System 1063
- Hormonal Control of Female Reproductive Cycles 1064
- Human Sexual Response 1066

### CONCEPT 45.5 In placental mammals, an embryo develops fully within the mother's uterus 1066

- Conception, Embryonic Development, and Birth 1066
- Maternal Immune Tolerance of the Embryo and Fetus 1069
- Contraception and Abortion 1069
- Modern Reproductive Technologies 1071

## 46 Development in Animals 1075

### CONCEPT 46.1 Fertilization and cleavage initiate embryonic development 1076

- Fertilization 1076
- Cleavage 1078

### CONCEPT 46.2 Morphogenesis in animals involves specific changes in cell shape, position, and survival 1081

- Gastrulation 1081
- Developmental Adaptations of Amniotes 1085
- Organogenesis 1086
- The Cytoskeleton in Morphogenesis 1088

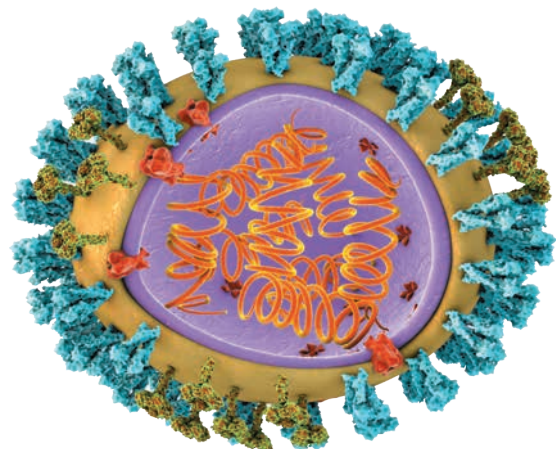

### CONCEPT 46.3 Cytoplasmic determinants and inductive signals regulate cell fate 1089

- Fate Mapping 1090
- Axis Formation 1091
- Restricting Developmental Potential 1092
- Cell Fate Determination and Pattern Formation by Inductive Signals 1093
- Cilia and Cell Fate 1096

## 47 Animal Defenses Against Infection 1100

### CONCEPT 47.1 In innate immunity, recognition and response rely on traits common to groups of pathogens 1101

- Innate Immunity of Invertebrates 1101
- Innate Immunity of Vertebrates 1102
- Evasion of Innate Immunity by Pathogens 1105

**CONCEPT 47.2** In adaptive immunity, receptors provide pathogen-specific recognition 1105

Antigens as the Trigger for Adaptive Immunity 1106  
Antigen Recognition by B Cells and Antibodies 1106  
Antigen Recognition by T Cells 1107  
B Cell and T Cell Development 1108

**CONCEPT 47.3** Adaptive immunity defends against infection of body fluids and body cells 1111

Helper T Cells: Activating Adaptive Immunity 1111  
B Cells and Antibodies: A Response to Extracellular Pathogens 1112  
Cytotoxic T Cells: A Response to Infected Host Cells 1114  
Summary of the Humoral and Cell-Mediated Immune Responses 1115  
Immunization 1116  
Active and Passive Immunity 1116  
Antibodies as Tools 1117  
Immune Rejection 1117

**CONCEPT 47.4** Disruptions in immune system function can elicit or exacerbate disease 1118

Exaggerated, Self-Directed, and Diminished Immune Responses 1118  
Evolutionary Adaptations of Pathogens That Underlie Immune System Avoidance 1119  
Cancer and Immunity 1122

## 48 Electrical Signals in Animals 1125

---

**CONCEPT 48.1** Neuron structure and organization reflect function in information transfer 1126

Neuron Structure and Function 1126  
Introduction to Information Processing 1126

**CONCEPT 48.2** Ion pumps and ion channels establish the resting potential of a neuron 1127

Formation of the Resting Potential 1128  
Modeling the Resting Potential 1129

**CONCEPT 48.3** Action potentials are the signals conducted by axons 1130

Hyperpolarization and Depolarization 1130  
Graded Potentials and Action Potentials 1131  
Generation of Action Potentials: *A Closer Look* 1131  
Conduction of Action Potentials 1133

**CONCEPT 48.4** Neurons communicate with other cells at synapses 1135

Generation of Postsynaptic Potentials 1136  
Summation of Postsynaptic Potentials 1137  
Termination of Neurotransmitter Signaling 1137  
Modulated Signaling at Synapses 1138  
Neurotransmitters 1138

## 49 Neural Regulation in Animals 1143

---

**CONCEPT 49.1** Nervous systems consist of circuits of neurons and supporting cells 1144

Organization of the Vertebrate Nervous System 1145  
The Peripheral Nervous System 1146  
Glial Cells 1148

**CONCEPT 49.2** The vertebrate brain is regionally specialized 1149

Arousal and Sleep 1152  
Biological Clock Regulation 1152  
Emotions 1153  
Functional Imaging of the Brain 1154

**CONCEPT 49.3** The cerebral cortex controls voluntary movement and cognitive functions 1154

Information Processing 1155  
Language and Speech 1156  
Lateralization of Cortical Function 1156  
Frontal Lobe Function 1156  
Evolution of Cognition in Vertebrates 1156

**CONCEPT 49.4** Changes in synaptic connections underlie memory and learning 1157

Neuronal Plasticity 1158  
Memory and Learning 1158  
Long-Term Potentiation 1159

**CONCEPT 49.5** Many nervous system disorders can now be explained in molecular terms 1160

Schizophrenia 1160  
Depression 1160  
The Brain's Reward System and Drug Addiction 1161  
Alzheimer's Disease 1161  
Parkinson's Disease 1162  
Future Directions in Brain Research 1162

## 50 Sensation and Movement in Animals 1165

---

**CONCEPT 50.1** Sensory receptors transduce stimulus energy and transmit signals to the central nervous system 1166

Sensory Reception and Transduction 1166  
Transmission 1167  
Perception 1167  
Amplification and Adaptation 1167  
Types of Sensory Receptors 1168

**CONCEPT 50.2** In hearing and equilibrium, mechanoreceptors detect moving fluid or settling particles 1170

Sensing of Gravity and Sound in Invertebrates 1170  
Hearing and Equilibrium in Mammals 1170  
Hearing and Equilibrium in Other Vertebrates 1174

**CONCEPT 50.3** The diverse visual receptors of animals depend on light-absorbing pigments 1175

Evolution of Visual Perception 1175  
The Vertebrate Visual System 1177

**CONCEPT 50.4** The senses of taste and smell rely on similar sets of sensory receptors 1181

Taste in Mammals 1181  
Smell in Humans 1182

**CONCEPT 50.5** The physical interaction of protein filaments is required for muscle function 1183

Vertebrate Skeletal Muscle 1184  
Other Types of Muscle 1189

**CONCEPT 50.6** Skeletal systems transform muscle contraction into locomotion 1190

Types of Skeletal Systems 1190  
Types of Locomotion 1193

**Interview:** Chelsea Rochman 1197

## 51 An Overview of Ecology 1198

**CONCEPT 51.1** Earth's climate varies by latitude and season and is changing rapidly 1201

- Global Climate Patterns 1201
- Regional and Local Effects on Climate 1201
- Effects of Vegetation on Climate 1203
- Microclimate 1203
- Global Climate Change 1204

**CONCEPT 51.2** The distribution of terrestrial biomes is controlled by climate and disturbance 1205

- Climate and Terrestrial Biomes 1205
- General Features of Terrestrial Biomes 1206
- Disturbance and Terrestrial Biomes 1206

**CONCEPT 51.3** Aquatic biomes are diverse and dynamic systems that cover most of Earth 1211

- Zonation in Aquatic Biomes 1211

**CONCEPT 51.4** Interactions between organisms and the environment limit the distribution of species 1212

- Dispersal and Distribution 1217
- Biotic Factors 1218
- Abiotic Factors 1218

**CONCEPT 51.5** Ecological change and evolution affect one another over long and short periods of time 1221

## 52 Behavioral Ecology 1225

**CONCEPT 52.1** Discrete sensory inputs can stimulate both simple and complex behaviors 1226

- Fixed Action Patterns 1226
- Migration 1226
- Behavioral Rhythms 1227
- Animal Signals and Communication 1227

**CONCEPT 52.2** Learning establishes specific links between experience and behavior 1229

- Experience and Behavior 1229
- Learning 1230

**CONCEPT 52.3** Selection for individual survival and reproductive success can explain diverse behaviors 1234

- Evolution of Foraging Behavior 1234
- Mating Behavior and Mate Choice 1235

**CONCEPT 52.4** Genetic analyses and the concept of inclusive fitness provide a basis for studying the evolution of behavior 1240

- Genetic Basis of Behavior 1241
- Genetic Variation and the Evolution of Behavior 1241
- Altruism 1242
- Inclusive Fitness 1243
- Evolution and Human Culture 1245

## 53 Populations and Life History Traits 1248

**CONCEPT 53.1** Biotic and abiotic factors affect population density, dispersion, and demographics 1249

- Density and Dispersion 1249
- Demographics 1251

**CONCEPT 53.2** The exponential model describes population growth in an idealized, unlimited environment 1254

- Changes in Population Size 1254
- Exponential Growth 1254

**CONCEPT 53.3** The logistic model describes how a population grows more slowly as it nears its carrying capacity 1255

- The Logistic Growth Model 1256
- The Logistic Model and Real Populations 1257

**CONCEPT 53.4** Life history traits are products of natural selection 1258

- Diversity of Life Histories 1258
- "Trade-offs" and Life Histories 1259

**CONCEPT 53.5** Density-dependent factors regulate population growth 1260

- Population Change and Population Density 1260
- Mechanisms of Density-Dependent Population Regulation 1261
- Population Dynamics 1263

**CONCEPT 53.6** The human population is no longer growing exponentially but is still increasing extremely rapidly 1265

- The Global Human Population 1265
- Global Carrying Capacity 1267

## 54 Biodiversity and Communities 1272

**CONCEPT 54.1** Interactions between species can help, harm, or have no effect on the individuals involved 1273

- Competition 1273
- Exploitation 1275
- Positive Interactions 1278

**CONCEPT 54.2** Diversity and trophic structure characterize biological communities 1280

- Species Diversity 1280
- Diversity and Community Stability 1281
- Trophic Structure 1281
- Species with a Large Impact 1283
- Bottom-Up and Top-Down Controls 1284

**CONCEPT 54.3** Disturbance influences species diversity and composition 1286

- Characterizing Disturbance 1286
- Ecological Succession 1287
- Human Disturbance 1289

**CONCEPT 54.4** Biogeographic factors affect community diversity 1289

- Latitudinal Gradients 1290
- Area Effects 1290
- Island Equilibrium Model 1290

**CONCEPT 54.5** Pathogens alter community structure locally and globally 1292

Effects on Community Structure 1292

Community Ecology and Zoonotic Diseases 1292

## 55 Energy Flow and Chemical Cycling in Ecosystems 1296

**CONCEPT 55.1** Physical laws govern energy flow and chemical cycling in ecosystems 1297

Energy Flow and Chemical Cycling 1297

Conservation of Energy 1297

Conservation of Mass 1297

Energy, Mass, and Trophic Levels 1298

**CONCEPT 55.2** Energy and other limiting factors control primary production in ecosystems 1299

Ecosystem Energy Budgets 1299

Primary Production in Aquatic Ecosystems 1300

Primary Production in Terrestrial Ecosystems 1301

Effects of Climate Change on Production 1302

**CONCEPT 55.3** Energy transfer between trophic levels is typically only 10% efficient 1304

Production Efficiency 1304

Trophic Efficiency and Ecological Pyramids 1304

**CONCEPT 55.4** Biological and geochemical processes cycle nutrients and water in ecosystems 1306

Decomposition and Nutrient Cycling Rates 1306

Biogeochemical Cycles 1307

*Case Study:* Nutrient Cycling in the Hubbard Brook Experimental Forest 1310

**CONCEPT 55.5** Restoration ecologists return degraded ecosystems to a more natural state 1311

Bioremediation 1311

Biological Augmentation 1313

Ecosystems: *A Review* 1313

## 56 Conservation and Global Ecology 1318

**CONCEPT 56.1** Human activities threaten earth's biodiversity 1319

Three Levels of Biodiversity 1319

Biodiversity and Human Welfare 1320

Threats to Biodiversity 1321

Can Extinct Species Be Resurrected? 1324

**CONCEPT 56.2** Population conservation focuses on population size, genetic diversity, and critical habitat 1324

Extinction Risks in Small Populations 1324

Critical Habitat 1327

Weighing Conflicting Demands 1328

**CONCEPT 56.3** Landscape and regional conservation help sustain biodiversity 1328

Landscape Structure and Biodiversity 1328

Establishing Protected Areas 1330

Urban Ecology 1331

**CONCEPT 56.4** Earth is changing rapidly as a result of human actions 1332

Nutrient Enrichment 1332

Toxins in the Environment 1333

Greenhouse Gases and Climate Change 1336

Depletion of Atmospheric Ozone 1341

**CONCEPT 56.5** Sustainable development can improve human lives while conserving biodiversity 1342

Sustainable Development 1342

The Future of the Biosphere 1343
